

# Trel-Pick

Orchard trellis  
platform

- [ Cheaper than an orchard Cherry Picker.
- [ Simple and safe to operate.
- [ Space for up to four workers.
- [ Holds 4 bins.

- [ Power steering.
- [ Four wheel steering.
- [ Infinitely variable speed hydrostatic drive.
- [ Fast traveling speed.

- [ Spring suspension on front wheels.
- [ Exempt from WorkSafe Elevating Work Platform regulations.

# Trel-Pick

The Trel-Pick is a simple platform which has three separate operating heights.

The base platform is 1.9m x 4.8m in total, fixed at 0.9m high. Space for two workers facing the trellis is 2.4m long. The remainder allows four bins to be carried with ample space for safe easy access to them and the raised platforms.

The mid platform is adjustable in height from 1.25m to 1.55m. The highest platform is also adjustable in height from 1.6m to 2.2m high. Both of these are 1.2m long x .6m wide, and slide in and out.

Access can be gained to either of the raised platforms from the side or rear. There are gates and comfortable

The Trel-Pick is simple to drive. The operator has control over engine throttle, hydrostatic ground speed, power steering and engine start and stop.

The operator only needs to correct steering occasionally even on rough ground and so is predominately able to pick, thin etc.

Rear steering is controlled with a foot pedal which is used mainly for crab steering in Tatura trellis and Parmet rows on steep ground. (It also allows for very sharp turning at the end of rows.)

Trel-Pick is powered by a 14hp V-twin petrol engine with oil alert and has a large air compressor able to run four air secateurs.

The engine base is mounted on springs to reduce vibration. A 25 litre remote fuel tank can be removed for easy refuelling.

**Disclaimer :** The pictures and information in this brochure are a guide only. Specifications are subject to change without notice and without liability expressed or implied.

A towing hitch enables a bin trailer to be towed behind the Trel-Pick for use by ground pickers.

The left side and back hand rails swing down to allow loading and unloading of bins.

Four crate holders are standard which hold a 22 lt or 36 lt crate. This holder fits over the hand rail.

Both raised platforms can be simply adjusted while still in the orchard. Height is varied in 100mm

increments by raising or lowering the platform in the telescopic slides. Platform overhang can be altered by sliding inwards or outwards.
